Education

KAIST (Korea Advanced Institute of Science and Technology) , Republic of Korea	2025.09 – Present
MS in School of Computing	Advisor: Prof. Dongman Lee
• Research field: Multi-Agent System, Multimodal Learning	
Waseda University , Japan	2024.10 – 2025.03
Exchange Program in Computer Science and Engineering	
Shanghai University , China	2021 – 2025
B.Eng in Computer Science	
• GPA: 3.75/4.0 (91.58/100), Rank: 4 %	
• Thesis: Research on Key Technologies and Implementation of Natural Scene Image Inpainting	

Publication/Preprints

 paper	 code	 project
[1] Last But Not Least: Boundary Attention CalibratiON for Multimodal KV Cache Compression		
EMNLP 2026 Main (15.4% Acceptance Rate)		
<i>Tianhao Chen, Yuheng Wu, Kelu Yao, Xiaogang Xu, Xiaobin Hu, Dongman Lee</i>		
• Proposed BACON, a plug-and-play multimodal KV cache compression method that leverages last-query attention to preserve critical visual tokens, improving both memory efficiency and multimodal reasoning performance.		
[2] LACO: Adaptive Latent Communication for Collaborative Driving		
Under Review		
<i>Tianhao Chen, Yuheng Wu, Dongman Lee</i>		
• Developed LACO, a training-free latent communication framework that adapts pretrained driving agents to collaborative multi-agent settings, enabling efficient information sharing and low-latency cooperative decision-making.		
[3] Delta Forcing: Trust Region Steering for Interactive Autoregressive Video Generation		
Under Review		
<i>Yuheng Wu, Xiangbo Gao, Tianhao Chen, Xinghao Chen, Qing Yin, Zhengzhong Tu, Dongman Lee</i>		
• Developed Delta Forcing, a real-time video generation framework that mitigates conditioning bias by balancing teacher supervision with trajectory consistency, enabling stable and temporally coherent long-horizon generation.		

Research/Internship Experience

XiangCai Securities Co., Ltd.	2024/05 – 2024/08
Large Language Model Algorithm Engineer	
• Developed an LLM-powered digital human for interactive financial consultation, integrating speech recognition, speech synthesis, and conversational intelligence to deliver natural, real-time user interactions.	

Project

Multimodal Temporal Grounding for Instructional Video Understanding	2024/06 – 2024/08
NC State University Summer Research Program	
• Developed a temporal grounding framework for long-horizon video understanding, integrating visual observations, temporal language cues, and task context to localize query-relevant events in extended video sequences.	

Awards & Honors & Funds

KAIST Full Scholarship	2025 - Present
Academic Distinction Scholarship in Shanghai University	2022 & 2023 & 2024
iFLYTEK AI DEVELOPER COMPETITION AWARD	2024/10
• Ranked Top 50 nationwide.
