

Tianhao Chen

thchen@kaist.ac.kr | c.tianhao.ai@gmail.com | Wechat: cth34998

Education

KAIST (Korea Advanced Institute of Science and Technology) , Republic of Korea	2025.09 – Present
MS in School of Computing	Advisor: <u>Prof. Dongman Lee</u>
• Research field: Multi-Agent System, Efficient Multimodal Inference	
Waseda University , Japan	2024.10 – 2025.03
Exchange Program in Computer Science and Engineering	
Shanghai University , China	2021 – 2025
B.Eng in Computer Science	
• GPA: 3.75/4.0 (91.58/100), Rank: 4 %	
• Thesis: Research on Key Technologies and Implementation of Natural Scene Image Inpainting	

Publication/Preprints

- [1] **LACO: Adaptive Latent Communication for Collaborative Driving**

Under Review

***Tianhao Chen**, Yuheng Wu, Dongman Lee*

• Developed LACO, a training-free latent communication framework that adapts pretrained driving agents to collaborative multi-agent environments, enabling efficient information sharing, low-latency coordination, and strong cooperative decision-making performance.
- [2] **Last But Not Least: Boundary Attention CalibratiON for Multimodal KV Cache Compression**

EMNLP 2026 Main (15.4% Acceptance Rate)

***Tianhao Chen**, Yuheng Wu, Kelu Yao, Xiaogang Xu, Xiaobin Hu, Dongman Lee*

• Proposed BACON, a plug-and-play multimodal inference optimization method that preserves sparse, decision-critical visual information under constrained memory budgets, enabling faster and more reliable perception for real-time intelligent agents.
- [3] **Delta Forcing: Trust Region Steering for Interactive Autoregressive Video Generation**

Under Review

*Yuheng Wu, Xiangbo Gao, **Tianhao Chen**, Xinghao Chen, Qing Yin, Zhengzhong Tu, Dongman Lee*

• Developed Delta Forcing, a real-time video generation framework that mitigates conditioning bias by dynamically balancing teacher supervision with trajectory consistency, enabling more stable, responsive, and temporally coherent long-horizon generation.

Research/Internship Experience

XiangCai Securities Co., Ltd.	2024/05 – 2024/08
Large Language Model Algorithm Engineer	
• Developed an LLM-powered digital human for interactive financial consultation, integrating speech recognition, speech synthesis, and conversational intelligence to deliver natural, real-time user interactions.	

Project

Multimodal Temporal Grounding for Instructional Video Understanding	2024/06 – 2024/08
NC State University Summer Research Program	
• Developed VPTSL, a cross-modal temporal grounding framework that aligns visual observations, timestamped language, and task instructions to identify decision-relevant moments in long-form videos.	

Awards & Honors & Funds

Academic Distinction Scholarship	2022 & 2023 & 2024
• Awarded for outstanding academic achievement during the academic year.	
iFLYTEK AI DEVELOPER COMPETITION AWARD	2024/10
• Ranked Top 50 nationwide.
